

Ravibalan Chithamparavel

Chennai, India | Backend & Database Developer | 8778236481 | ravibalan523@gmail.com

PROFESSIONAL SUMMARY:

Enterprise Application Developer with strong expertise in database engineering, backend development, and application support. Proven career growth from Developer → Senior Developer → Team Lead, managing end-to-end enterprise projects. Specialized in SQL performance tuning, Node.js API development, and data-driven system optimization. Experienced in Azure AI-based automation and large-scale data processing. Currently expanding skills in Data Science to integrate AI-driven insights into enterprise systems.

PROFESSIONAL DEVELOPMENT & LEARNING:

- Currently pursuing Data Science Certification, focusing on Statistics, Machine Learning, and Deep Learning.
- Applying analytical concepts to real-world enterprise data for automation and performance optimization.
- Exploring AI integration with backend systems to enhance decision-making and predictive insights.

CORE SKILLS :

- Server, PostgreSQL Cloud & AI: Microsoft Azure (Custom Document Extraction, Blob Storage, Serverless API)
- Data Engineering: ETL Integration, Query Optimization, Data Modeling Tools & Libraries: Prisma ORM, Axios
- Multier Specialization: API Design, Performance Tuning, System Architecture, Application Support
- Languages & Frameworks: Node.js, Express.js, JavaScript Database Management: Microsoft SQL

PROFESSIONAL EXPERIENCE:

NOV 2022 - PRESENT

TEAM LEAD :

GOVE ENTERPRISES/JAN 2025 - PRESENT

- Led a 6-member backend development team, managing project tasks, timelines, and delivery quality.
- Mentored junior developers on SQL query writing, backend design, and performance optimization.
- Coordinated with cross-functional teams including QA, DevOps, and business stakeholders for deployment readiness.
- Enforced best practices in code quality, database indexing, and application scalability.

BACKEND DEVELOPER :

GOVE ENTERPRISES/MAY 2024 - PRESENT

- Developed and maintained scalable backend systems using Node.js and Express.js for enterprise-grade applications.
- Architected RESTful APIs to support data exchange between multiple internal and external services.
- Enhanced server-side functionality by debugging and restructuring existing modules for improved performance.
- Collaborated with frontend and database teams to ensure end-to-end workflow synchronization and error handling

DATABASE DEVELOPER:

GOVE ENTERPRISES/MAR 2023 - PRESENT

- Managed enterprise-level SQL databases by troubleshooting, optimizing queries, and maintaining data integrity.
- Designed and optimized relational database structures for faster query execution and efficient data retrieval.
- Worked on ETL integration for importing large-scale datasets into SQL Server with high accuracy and consistency.
- Implemented stored procedures, triggers, and views to automate recurring data workflows and reporting processes.
- Focused on query optimization and indexing, significantly reducing query execution time and resource usage.

APPLICATION SUPPORT ENGINEER :

GOVE ENTERPRISES/NOV 2022 - MAR 2023

- Provided end-to-end production support for enterprise applications, ensuring uptime and issue resolution.
- Performed root cause analysis for data anomalies and optimized stored procedures for better performance.
- Improved application reliability by automating recurring data checks and validation routines.

KEY PROJECTS:

BILLING MANAGEMENT SYSTEM (ROLE: SQL DEVELOPER:

- Developed and maintained stored procedures, functions, and triggers to automate toll transaction billing and invoice generation.
- Designed SQL logic for handling multiple U.S. toll vendors with unique billing formats and reconciliation processes.
- Managed data imports, validation, and transformations directly within SQL Server to support large-scale billing workflows..
- Result: Delivered a highly reliable, automated billing backend capable of processing large volumes of transactions with minimal manual intervention.

FLEET MANAGEMENT SYSTEM (ROLE: SQL DEVELOPER):

- Managed toll operations and fleet management for a truck leasing enterprise, processing over 50GB of transactional data.
- Designed and implemented optimized database schemas in Microsoft SQL Server under a monolithic architecture.
- Developed and tuned stored procedures to automate trip reconciliation, billing, and reporting.
- Created backend logic in Node.js for handling live toll transactions, route optimizations, and cost analytics.
- Result: Improved data consistency and reduced manual reconciliation errors by 35%

DOCUMENT EXTRACTION SYSTEM (ROLE: BACKEND DEVELOPER; AI INTEGRATION) :

- Implemented a Custom Document Extraction solution using Azure AI, training models on over 100 types of images including invoices, toll receipts, and permits.
- Automated image extraction and transformation for complex documents where layout structures varied widely.
- Built a Serverless API for document ingestion, triggering Azure AI's extraction and storing results in Blob Storage.
- Managed complex data transformation and validation logic to ensure field accuracy and consistency post-extraction.
- Result: Achieved 40% reduction in manual data processing time and improved document accuracy for enterprise workflows

BILLING & INVOICE WEB APPLICATION (ROLE: TEAM LEAD; BACKEND ARCHITECTURE) :

- Designed and developed end-to-end backend architecture for a full-scale enterprise billing and invoice management system integrated with AI-powered document processing.
- Built and deployed secure REST APIs to handle billing workflows, document uploads, transaction validation, and financial reconciliations across multiple tenants.
- Integrated Microsoft SQL Server for high-volume transaction management, vendor settlements, and reporting with optimized stored procedures and triggers.
- Collaborated with the AI document extraction module to automatically process and validate uploaded invoices using Azure AI's OCR and data extraction capabilities.
- Implemented intelligent duplicate detection and anomaly checks, reducing manual review time and improving data consistency across modules.
- Managed a 6-member backend team, ensuring code quality, task prioritization, and on-time delivery of critical milestones.
- Designed serverless endpoints for background processing (e.g., file validation, reconciliation summaries, and data sync jobs).
- Optimized database queries and caching logic to handle millions of records seamlessly, ensuring near real-time data updates.
- Result: Delivered a highly scalable, AI-assisted billing platform capable of processing large datasets efficiently, improving document accuracy, and accelerating reconciliation time by 45%.

EDUCATION:

Computer Engineering in Dip,
Mahendra Group Of Institution
